

Summary

- Over **7 years of experience** specializing in **Adobe Experience Manager (AEM)**, with proven expertise in **developing, managing, and optimizing** web content management solutions to deliver seamless and engaging digital experiences.
- Extensive hands-on experience with **AEM/CQ versions 6.3, 6.4, and 6.5**.
- In-depth understanding of **AEM building blocks**, including **CRX, Oak repository, Apache Sling, and OSGi**.
- Worked across multiple AEM domains such as **WCM, DAM, Workflows, User Management, Multi-Site Manager, OSGi services, Sling, CRXDE, Ext JS, Bulk Editor, Schedulers, Index creation, UI customizations, Dynamic Media, Adobe Stock, Brand Portal, and Adobe I/O**.
- Strong expertise in **Digital Asset Management (DAM)**, from **requirement gathering to solution design and implementation**.
- Skilled in system integration, writing test cases, bug fixing, enhancements, and well-versed in quality management and system support.
- Proficient in **HTML5, CSS3, XML**, and modern frameworks like **ReactJS** and **VueJS** for building **responsive, interactive** web applications.
- Demonstrated ability to improve page performance metrics by optimizing load times, enhancing user experience, and applying best practices for performance monitoring and optimization (e.g., reducing page weight, improving First Contentful Paint, and optimizing JavaScript/CSS delivery).
- Experienced in both **Agile (Scrum)** and **Waterfall** methodologies.
- Highly motivated, results-driven, and detail-oriented professional with strong analytical and problem-solving skills, excelling as both an individual contributor and a team leader.

Languages:	Java, Python, TypeScript, JavaScript, Sightly, HTML, CSS, XML
Frameworks	Spring Boot, ReactJS, NodeJS, VueJS
Content Management System	AEM Guides, AEM (6.3, 6.4, 6.5 and AEMaaCS)
IDE(s):	IntelliJ, Eclipse, VScode, PyCharm, Atom, Brackets
Operating Systems:	Windows, Mac, Linux
SCM:	Git, Bitbucket, SCM
Utilities:	Maven, Gradle, Jenkins, Azure DevOps, Adobe I/O
Methodologies:	Agile (Scrum), Waterfall

Professional Experience

Hashout Technologies	:	August 2024 – Present
VISA Inc.	:	May 2023 – August 2024
Accenture Solutions	:	September 2021 – May 2023
Mindtree Limited	:	January 2019 – September 2021

Education

Bachelor of Technology in Computer Science Engineering from Rajasthan Technical University, Kota - Graduated in June 2018.

Projects Summary

Project #1

Company: Hashout Technologies

Client: LinkedIn Corporation

September 2025 – Present

Role: Senior AEM Full Stack Developer

Project Description:

Migrating LinkedIn's enterprise documentation platform from the internal CMS (Lithograph) to Adobe Experience Manager (AEM) Guides. Designed and delivered a scalable, DITA-based documentation solution supporting structured authoring, versioning, baseline management, and MSM-driven multilingual publishing. Implemented automated translation workflows through integration with LinkedIn's internal translation engine, ensuring consistency, scalability, and faster global content delivery.

Tasks and Responsibilities:

- Worked on migrating LinkedIn's documentation from the internal CMS (Lithograph) to Adobe Experience Manager (AEM) Guides.
- Designed DITA and DITA-map structures along with required metadata to support structured authoring and publishing.
- Implemented custom translation workflows in AEM Guides using MSM for multilingual documentation.
- Built a **custom translation connector** integrated with **LinkedIn's internal LRE**.
- Integrated **Azure Blob Storage and Azure Service Bus** to handle translation request/response payloads asynchronously.
- Supported automated publishing and translation tracking to ensure reliable and scalable global content delivery.

Environment: AEM Guides, AEM, JAVA, Azure Integration, DITA-OT Ingestion, HTML, CSS, JavaScript.

Project #2

Company: Hashout Technologies

Client: Cloud Software Group (CSG)

March 2025 – July 2025

Role: Senior AEM Full Stack Developer

Project Description:

The client organization was transitioning from Salesforce CRM to Oracle CRM. As a partner to CSG, our objective in this project was to ensure that the digital experience for all their products remained fully functional after the migration. The project encompassed multiple codebases used by various business units, as well as synchronization of jobs related to different partners. Our role involved analyzing updating all relevant codebases to align with the new CRM capabilities, ensuring existing functionalities were preserved while seamlessly integrating new features.

Tasks and Responsibilities:

- Analysed multiple codebases to ensure readiness for adopting the new CRM changes.
- Designed, developed, and enhanced features across various Business Units, including TIBCO, Spotfire, Jaspersoft, IBI, Citrix, NetScaler, and Cloud.
- Migrated SSO implementation by replacing the SAML-based middleware service with OIDC integration via Okta.
- Enhanced a Python-based application (Citrix Partner Locator) to create an on-demand API that ingests data from Oracle Fusion into an Azure index for retrieval by upstream applications.
- Refactored and migrated a Spring Boot application to support the new CRM, ensuring continued functionality for over 20 REST APIs.
- Contributed as a full stack developer to a Vue.js and Node.js codebase that powers the frontend for multiple Business Units.

Environment: AEM, JAVA, Spring Boot, PostgreSQL, Python, VueJS, NodeJS, OSGI, Sightly, HTML, CSS, Maven, IntelliJ, GitHub, Azure DevOps, Dispatcher, CDN.

Awards and Achievements: Received multiple client appreciations and an organization-level “Spotlight Award” in recognition of my contributions to this project.

Project #3

Company: Hashout Technologies

Client: Cloud Software Group (CSG)

Aug 2024 – March 2025

Role: AEM Developer (Backend, Frontend)

Project Description:

The goal of this project was to migrate the client's existing software downloads portal from a legacy Java-based application to Adobe Experience Manager (AEM), covering platforms such as <https://www.tibco.com/downloads> and <https://www.spotfire.com/downloads>.

Tasks and Responsibilities:

- Created components, templates, and established the initial project structure.
- Developed Sling Models and services, integrating various third-party systems such as EPM, Solid State DLM Downloader, SendGrid, and Akamai for downloadable files.
- Designed and architected the import flow for ingesting PIM data into AEM, processing it to create content fragments and corresponding product download pages.
- Worked on content fragments, workflows, user management, CUGs, and configured replication agents.
- Implemented and integrated Ping Federated SSO for user authentication and leveraged Closed User Groups (CUGs) for authorization.

Environment: AEM 6.5.23, JAVA, OSGI, Sightly, HTML, CSS, Javascript, Maven, IntelliJ, Azure Devops, Ping SSO, Dispatcher, CDN.

Awards and Achievements: Received multiple client appreciations in recognition of my contributions to this project.

Project #4

Company: VISA Inc

May 2023 – Aug 2024

Role: Senior Software Engineer

Project Description:

The goal of this project is to manage and enhance the organization's intranet application, which is used enterprise-wide for a wide range of activities, including accessing announcements and information, checking leave and holiday details, filling timesheets, registering for sessions or courses, and performing numerous other operational tasks.

Tasks and Responsibilities:

- Updated and optimized the project structure to align with the latest industry standards, enhancing scalability, performance, and compatibility.
- Enhanced components and optimized code for improved readability and maintainability.
- Migrated the frontend framework from AngularJS to ReactJS.
- Developed and enhanced multiple React-based frontend components.
- Improved search functionality for better performance and indexing across both frontend and backend systems.
- Identified and resolved bugs, ensuring system stability and improving overall platform functionality.

Environment: AEM, GCP, JAVA, ReactJS, AngularJS, IIS, OSGI, Sightly, HTML, CSS, JavaScript, Maven, IntelliJ, Dispatcher, CDN.

Awards and Achievements: Received multiple client appreciations and Spot-on awards in recognition of my contributions to this project.

Project #5

Company: Accenture Solutions

Client: Adobe Systems

June 2022 - May 2023

Role: AEM Tech Lead

Project Description:

The goal of this project is to deliver an AEM development solution for Blue Shield of California Health Insurance by migrating their website from a legacy system to Adobe Experience Manager (AEM).

Tasks and Responsibilities:

- Developed custom components, implemented translation workflows, and implemented the search feature using AEM indexes.
- Built Sling Models, Servlets, and OSGi services to support various business requirements.
- Created form components with multiple layout types for improved flexibility.
- Implemented DAM-related features, including search facets and metadata schemas for assets, and smart tags creation.
- Identified and resolved bugs, ensuring system stability and enhancing overall platform functionality.

Environment: AEM, Brand portal, Adobe Stock, Smart tags, JAVA, OSGI, React, Maven, IntelliJ.

Awards and Achievements: Received Star award in recognition of my contributions to this project.

Project #6

Company: Accenture Solutions

Client: Royal Caribbean Group

September 2021 – June 2022

Role: Senior Full Stack AEM Developer

Project Description:

This project involves the development and ongoing management of the Royal Caribbean Cruise website (<https://www.royalcaribbean.com/>), with a focus on enhancing the online customer experience and ensuring seamless access to cruise packages and services.

Tasks and Responsibilities:

- Worked on Sling Models, Custom Components, OSGI Services, Configurations, Run modes, Editable Templates, Adobe Launch.
- Worked on Asset Management capabilities such as Dynamic

Environment: AEM 6.5, Dynamic Media JAVA, OSGI, Sightly, JavaScript, jQuery, Maven.

Project #7

Company: Mindtree Limited

Client: Kellogg's

Feb 2021 – September 2021

Role: Senior Software Engineer

Project Description:

The goal of this project is to renovate and migrate the existing rewards program site from AEM 6.1 to AEM 6.5. This complete revamp, initiated from scratch, leverages the latest AEM features to enhance the user's digital experience and deliver improved functionality and performance.

Tasks and Responsibilities:

- Worked on Components, editable templates, Sling Models, OSGI Configurations, Services, Servlets.
- Involved in Requirement gathering with the client.
- Worked on Troubleshooting Production issues.
- Developed and optimized the complete order placement to checkout flow, including implementing and refining cart logic for a seamless user experience.

Environment: AEM 6.5, JAVA, Javascript, Jenkins, VueJS, Maven.

Awards and Achievements: Received multiple (20+) peer and manager recognition awards for my contributions to this project.

Project #8

Company: Mindtree Limited

Client: Kellogg's

Aug 2020 – Feb 2021

Role: Senior Software Engineer

Project Description:

The goal of the K.COM Consolidation project was to develop an integrated system to manage multiple sub-brands and their associated products within a unified platform. This initiative aimed to streamline product data management, enhance operational efficiency, and ensure consistency across all sub-brand websites.

Tasks and Responsibilities:

- Designed and implemented automation for PIM validation to ensure data accuracy and compliance with publishing standards.
- Collaborated with cross-functional teams to align product information and workflows across multiple brands.
- Conducted testing and troubleshooting to maintain system stability and enhance overall performance.
- Worked on Sling models, Servlets, Workflows, preprocessors, editable templates, Core components, DAM Assets.

Environment: AEM 6.5, JAVA, Javascript, Jenkins, JQuery, Maven.

Awards and Achievements: Received multiple (10+) peer and manager recognition awards for my contributions to this project.

Project #9

Company: Mindtree Limited

Client: Kellogg's

June 2019 – Aug 2020

Role: Software Engineer

Project Description:

The goal of Project Engage was to create a scalable and unified platform capable of supporting multiple brand websites under a single architecture. The solution aimed to maximize component reusability, streamline content management, and deliver a consistent user experience across all brands. By leveraging AEM's capabilities and custom OSGi modules, the project focused on enhancing search features, integrating rich media, and ensuring the platform could easily accommodate future brand rollouts with minimal development overhead.

Tasks and Responsibilities:

- Designed and implemented OSGi modules to deliver key features such as global site search, recipe search, and video search.
- Integrated YouTube functionality.
- Worked on Sling models, Servlets, Workflows, preprocessors, editable templates, Core components, DAM Assets.
- Ensured scalability of the platform, enabling rapid onboarding of new brand sites with minimal development effort.
- Streamlined content management processes to provide a unified and efficient authoring experience.

Environment: AEM 6.5, JAVA, Javascript, Jenkins, JQuery, Maven.

Awards and Achievements: Received multiple (30+) peer and manager recognition awards for my contributions to this project.
